

Object Handler - Find

This function is used to locate objects in your Natural environment and generate a list of the objects found.

 **To invoke the find function**

- On any Object Handler screen, in the command line, enter GO FIND.

For information on

- The columns that appear on the report screen generated by the find function, refer to the section Object Specification.
- The subcommands provided with GO FIND, refer to the relevant section in Object Handler Commands for CUIs.
