## Function

The statement **CLOSE CONVERSATION** is used in conjunction with Natural RPC. It allows the client to close conversations. You can close the current conversation, another open conversation, or all open conversations.

### Note:

A logon to another library does not automatically close conversations.

## Conversation to be Closed

### operand1

To close a specific open conversation, you specify its ID as operand1. Operand1 must be a variable of format/length 14.

### \*CONVID

To close the current conversation, you specify \*CONVID. The ID of the current conversation is determined by the value of the system variable \*CONVID.

### ALL

To close all open conversations, you specify ALL.

## Further Information and Examples

See the Natural RPC documentation.
