

# ETIO - Issue END TRANSACTION upon Terminal I/O

This Natural profile parameter is for mainframes only.

It determines whether or not implicit END TRANSACTION statements are to be issued upon terminal I/Os.

<b>Possible settings</b>	ON	Natural will issue an implicit END TRANSACTION statement whenever a terminal I/O occurs. Whenever a transaction monitor commits the associated databases because of a terminal I/O, all related databases are also committed. This is useful for the synchronization of database transactions.
	OFF	Natural will issue no implicit END TRANSACTION statements upon terminal I/Os.
<b>Default setting</b>	OFF	
<b>Dynamic specification</b>	YES	
<b>Specification within session</b>	NO
