

# RDPORT - Remote Debugger Port

This Natural profile parameter is for UNIX/OpenVMS and Windows platforms only.

It specifies the port number on which a remote debugger on a Windows NT computer has been installed.

<b>Possible settings</b>	0 - 9999	Port number.  By default, the debugger service is installed on the Windows NT computer's Port 2500. You can therefore leave the OpenVMS or UNIX computer's RDPORT setting at the default. If, however, Port 2500 on Windows NT has been reserved for another service, and a different port number has been specified, you must change RDPORT accordingly.
<b>Default setting</b>	2500	
<b>Dynamic specification</b>	YES	
<b>Specification within session</b>	NO
