

# REINP - Issue Internal REINPUT Statement for Invalid Data

This Natural profile parameter is for:

- mainframes
- UNIX/OpenVMS and Windows

By default, Natural automatically issues an internal REINPUT statement if invalid data have been entered in response to an INPUT statement. With this parameter, you can switch this mechanism off. This will allow you to handle such input errors yourself in your application.

<b>Possible settings</b>	ON	An internal REINPUT statement is issued when invalid data have been entered.
	OFF	An internal REINPUT statement is not issued when invalid data have been entered.
<b>Default setting</b>	ON	
<b>Dynamic specification</b>	YES	
<b>Specification within session</b>	YES	Within a Natural session, the profile parameter REINP can be overridden by the <b>session parameter</b> REINP.
