

# RFILE - File for Recordings

This Natural profile parameter is for mainframes only.

It determines where recordings (that is, the data recorded by the Recording function) are stored.

<b>Possible settings</b>	SPAD	Recordings will be stored in the scratch-pad file. (If no scratch-pad file is defined, the recordings will be stored in the system file FUSER.)
	FUSER	Recordings will be stored in the system file FUSER.
	FNAT	Recordings will be stored in the system file FNAT.
<b>Default setting</b>	SPAD	
<b>Dynamic specification</b>	YES	
<b>Specification within session</b>	NO	

For details on the Recording function, see the NATPAGE utility in the section Debugging and Monitoring.
