

TS - Translate Output from Programs in System Libraries

This Natural profile parameter is for mainframes only.

It is used to translate output from Natural system libraries (that is, libraries whose names begin with "SYS") using a translation table. This may be necessary for locations which have non-standard lower-case usage (for example, Middle East countries); see also the profile parameter PM.

Possible settings	ON	Output is translated.
	OFF	Output is not translated.
Default setting	OFF	
Dynamic specification	YES	
Specification within session	YES	Within a Natural session, the profile parameter TS can be overridden by the session parameter TS .

In addition, with TS=ON, the profile parameter LC=OFF and the session parameter AD=T, both of which translate input to upper case, are ignored, as they would cause undesired character translation for special character sets.

The translation table can be modified with the NTTABL macro or the corresponding dynamic profile parameter TABL.

The TS parameter applies only to primary output (CMPRINT).
