

TS - Translate Output from Programs in System Libraries

Note:

This parameter is for Mainframes only.

Parameter	Possible Values	Default Value	Applicable Statements
TS	ON / OFF	OFF	GLOBALS system command

This session parameter is used to translate output from Natural system libraries (that is, libraries whose names begin with "SYS") using a translate table. This may be necessary for locations which have non-standard lower-case usage (for example, Middle East countries); see also session parameter PM.

Note:

If TS=ON, the profile parameter LC=OFF and the session parameter AD=T, both of which translate input to upper case, are ignored, as they would cause undesired character translation for special character sets.
