

%B= - Recording Library

Note:

This command is for Mainframes only.

Command Syntax

| |
|-------------------------------------|
| <code>%B=<i>library-name</i></code> |
|-------------------------------------|

With the terminal command `%B=library-name`, you specify the library in which all subsequent recording actions are to be stored.

If you activate the recording process without having specified a library, the name of the library in which the recording is stored will be the same as the value of the system variable `*INIT-USER` at the time when the recording process is activated.

When you log on to another library during a session being recorded, the library in which the recording is being stored will remain the same (that is, either the one specified with `%B=` or the `*INIT-USER` library); this means that one recording may record actions across multiple applications.

Further information on recording is provided in Recording in the section Debugging and Monitoring.
