

%QO - Suppress Pseudo-Conversational Output

Note:

- This command is for Mainframes only.
- It is only applicable under CICS.

Command Syntax

%QO

In a Natural session running under CICS in pseudo-conversational mode, you can switch to another CICS transaction by issuing the statement `CALL 'CMTASK'`. To enable CICS to start the other transaction, a terminal I/O, i.e. an `INPUT` statement, is required after the `CALL` statement.

To suppress the screen output of that `INPUT` statement (which would be overwritten immediately by the started transaction anyway), you issue a `SET CONTROL 'QO'` statement before the `INPUT` statement.
