

# Processor Cataloging

Once you have specified runtime actions for all of the functions you want to use in your command processor, you should catalog the command processor. Cataloging a command processor generates a Natural object of type Processor.

## To catalog a command processor

1. On the Processor Maintenance menu, enter Function Code **C** (Catalog Processor), the name of the command processor to be cataloged, and the name of the Natural library in which the command processor is to be cataloged.
2. Press ENTER.

### **Note:**

If you have Natural Security installed, you have to allow the use of your command processor as described in the Natural Security documentation in the section Functional Security.

### **Note for Windows, UNIX and OpenVMS:**

Unlike on mainframes, SYSNCP does not create a report when cataloging a command processor.
