

User Exit USR0020P

The user exit program USR0020P in the library SYSEXT is provided to read messages from the FNAT or FUSER system file. Thus, it is possible, for example, to have long messages displayed in an application (as part of your own user-defined help system) without having to use the library SYSERR.

Log on to the library SYSEXT and enter the command MENU. On the list provided, mark the program USR0020P with a question mark (?); a window is displayed, on which you can select the function to be executed for the program. If you enter an **I**, detailed information on the use of USR0020P is displayed.
