

# Color Schemes

You can define color schemes for the different host sessions.

**Note:**

The color scheme can also be defined directly from the Terminal Viewer. See *Modifying the Color Scheme for a Host Session* in the *Individual Session Settings* documentation

This chapter covers the following topics:

- Predefined Color Schemes
  - Overview of Defined Color Schemes
  - Renaming a Color Scheme
- 

## Predefined Color Schemes

Entire Screen Builder is installed with certain default assignments for supported host systems. The following color schemes are supplied:

Color Scheme	Description
SagBlue	Blue background.
bs2cols	Default color scheme for sessions of type BS2000. Mixed background.
ibm3279	Default color scheme for sessions of type Telnet TN3270. Black background.
monochrome1	White on black background.
monochrome2	Black on white background.
sagcolors	Gray background.
VTColors	Default color scheme for sessions of type Telnet VT and Natural UNIX. Black background.

## Overview of Defined Color Schemes

When you select the "Color Schemes" object in the tree-view frame, a list of all defined color schemes appears in the detail-view frame.

Color Schemes		
	Property	Value
	Service status	Stopped
	SagBlue	2
	VTCOLORS	7
	bs2cols	3
	ibm3279	4
	monochrome1	5
	monochrome2	6
	sagcolors	1

### Commands

When the Entire Screen Builder Server has been stopped and a color scheme has been selected, the following command buttons are available in the command frame:

<b>Copy Color Scheme</b>	Copy the selected color scheme. Specify a name in the resulting dialog and choose the <b>Save New Color Scheme</b> button.
<b>Delete Color Scheme</b>	Delete the selected color scheme. You will be asked to confirm the deletion.

The default color schemes "ibm3279", "bs2cols" and "VTCOLORS" cannot be deleted or renamed.

#### Important:

When you delete or rename a color scheme, any session using this color scheme will then use the default color scheme for the corresponding type of session.

#### Note:

It is not possible to add color schemes using the System Management Hub. It is only possible to rename or copy a color scheme. If you want to add color schemes, you have to use Entire Screen Builder's Server Management tool; see *Adding a Color Scheme* in the *Server Management* documentation.

## Renaming a Color Scheme

It is only possible to rename a color scheme when the Entire Screen Builder Server has been stopped.

When the server is running, you can only view the properties.

### ▶ To rename a color scheme

1. Select the desired color scheme in the tree-view frame.
2. In the resulting dialog, rename the color scheme.

	Color Scheme Property	Value
	Color scheme type:	3270
<b>ID</b>	Color scheme ID:	2
	Color scheme name:	<input type="text" value="SagBlue"/>

Update Color Scheme      Cancel Update Color Scheme

3. Choose the **Update Color Scheme** button.
