

# Locking the Current Session

This feature is only available in the Terminal Viewer. It is not available for anonymous users.

When you lock a session, terminal emulation is no longer displayed and "locked" appears in the title bar. As long as you do not unlock the session, nobody can work with it.

## ▶ To lock the session

- From the **Utilities** menu, choose **Lock/Unlock Session**.

When the session is locked, a check mark is shown next to this command.

## ▶ To unlock the session

1. From the **Utilities** menu, choose **Lock/Unlock Session**.

A logon dialog box appears. It shows the user name with which you are currently logged in.

2. Enter your password (if required).
3. Choose the **OK** button.
