

Verification-Specific Maintenance

Purge Verification - Code P

A verification of type automatic cannot be purged. To purge a verification of this type, perform the following steps:

- Remove all links from fields to the verification
- Regenerate DDMs that were generated from the files linked to these fields.

When the verification is no longer connected to any fields, the status is changed to conceptual and the rule can be purged.

Rename/Change Status of a Verification - Code N

Changing the status of a verification is limited. For further information see Changing the Status of a Verification in the section **Verifications and Processing Rules** in the **Predict and Other Systems** documentation.

Edit Rule of a Verification - Code R

Processing rules of verifications are edited with the Predict Verification Editor. This editor can be invoked in one of the following ways:

- By entering Y in the field EDIT Rule in the bottom line of the Add a Verification, Copy Verification or Modify Verification screen.
- By calling the function Edit rule in the Verification Maintenance menu (Code R).
- By entering the direct command EDIT VERIFICATION RULE <Verification-ID>

Note:

Statements of the rule must not contain statement references to line numbers; use labels instead.

Rule Editor

For information on the Rule Editor, see the **Predict Reference documentation**. General editor commands are described in the section Editors in Predict in the **Predict Reference documentation**.
