

Operations of Entire System Server / UNIX and Windows NT

This section covers the following topic:

- Handling of Entire Broker Error Codes

Handling of Entire Broker Error Codes

The Entire System Server nodes on Unix and Windows NT use the Entire Broker as middleware for the communication with Entire Operations monitors.

If communication errors occur, the Entire Broker error codes will be examined. This is done as follows:

Entire Broker Error Code	Action
0000 / 0000	Normal operation.
0003 / 0005	Partner finished the conversation. Temporary error. Entire System Server waits until the communication returns to normal operation.
0003 / 0010	EOC due to deregister of partner. Temporary error. Entire System Server waits until the communication returns to normal operation.
0003 / 0011	Partner has canceled conversation. Temporary error. Entire System Server waits until the communication returns to normal operation.
0003 / 0011	EOC due to LOGOFF of partner. Temporary error. Entire System Server waits until the communication returns to normal operation.
0003 / 0067	Partner timeout occurred. Temporary error. Entire System Server waits until the communication returns to normal operation.
0003 / 0073	Conversation timeout occurred. Temporary error. Entire System Server waits until the communication returns to normal operation.
Others	Severe error. Entire System Server writes the message to the sysout and performs a shutdown. Please check the sysout for the error reason.

Please refer to the documentation of the Entire Broker for details about Entire Broker error codes.
