

Deactivation in Foreground

Usually the job deactivation is triggered in foreground and executed by the Entire Operations Monitor.

Warning:

Use this function to deactivate active jobs in foreground only in case of emergency, and if the Entire Operations Monitor is not active.

▶ To perform deactivation

1. Mark Deactivation in Foreground with any character and press Enter.

A window opens:

```

20.11.01          *** Entire Operations 4.1.1 ***          15:39:17
                  Special Function Selection
-----
Cmd  Function
_    Global Schedule Extraction
_    Cleanup of the Active Database
_    Control of Activity Monitoring

_    Removal  +-----+
x    Deactiva !                               !
_    System F ! Please confirm                 !
_    JCL File ! by entering DEACTIVATION      !
                  ! ==> _____          !
                  ! PF3 End                   !
                  +-----+

Command => _____
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help           End

```

2. Confirm deactivation by entering DEACTIVATION and pressing Enter.
