

# Natural Programs

In Entire Operations, Natural programs can be defined as NAT-type jobs within job networks. They have no JCL and are executed directly by the Entire Operations Monitor. Like all jobs, NAT-type jobs are defined using the Entire Operations Network and Job Maintenance facility (Network and Job Maintenance option on the Main Menu).

You can maintain NAT-type jobs like any other job, that is, they can be associated with input and output conditions, resources, etc. (see the section Job Maintenance).
