

Editor

Entire Operations provides a version of the Software AG Editor especially adapted to the Entire Operations environment.

You can use the Entire Operations Editor to perform the following:

- Create or edit JCL for jobs.
Existing JCL can be edited, even if it was written outside of Entire Operations using other editors;
- Create or edit JCL for jobs of type MAC (macro).
- Write Natural programs to run as jobs in job networks or be executed as user routines;
- Write and browse text descriptions at the network, job, and event level (online documentation);
- Display JCL, job sysout and listings in browse mode (no editing possible);
- Display the Entire Operations system log.

The Editor is described in detail in the **Software AG Editor Documentation**.
