

Job Control for Jobs under UNIX

This subsection covers the following topic:

- Entire Operations Work Directory
-

Entire Operations Work Directory

The environment variable `$EOR_WORK` of NPR/UNIX contains the name of the Entire Operations work directory. Within this directory, the work files are hierarchically stored.

The name generation for work files under BS2000/OSD is described in the subsection Naming Conventions for Work Files Created by Entire Operations, UNIX of the Entire Operations Installation and Operations Documentation.
