

Symbol Prompting during Manual Activation

This subsection covers the following topics:

- Overview
- Special PF Keys

Overview

If any of the activated jobs are MAC-type jobs (dynamic JCL generation) or JOB-type jobs whose JCL contains symbols for variable values, these symbols are replaced by their current values during the manual activation, except those that are defined to be replaced at submission time.

If the activation is manual, and if the JCL of a job contains symbols that are defined to be prompted, you are prompted for the values to be used in this activation. For the symbols to be prompted, the following screen appears in which you can enter the values to be used, for example:

```

20.11.01          *** Entire Operations 4.1.1 ***          16:08:36

Special PF Keys

Key	Name	Function
PF5	Accept	Accept all symbols and continue with the activation. If the list of prompted symbols exceeds one screen, please scroll to the end of the list with PF8 first, before using PF5 .
PF6	Cancel	Cancel this activation.

For further information, see the subsection Symbol Prompting in the section Symbols.
