

Using Calendars

You need not use calendars when defining a schedule. If no calendar is specified, all days are treated as workdays.

If a calendar is specified, a schedule definition date is used only if it is a calendar workday. Networks are not activated on holidays. To activate a network on the workday **after** the holiday, mark the Monthly, Weekly or Explicit Date of the schedule definition with an **A**. To activate a network on the workday **before** the holiday mark the appropriate date with a **B**.

For more information on calendars, see the section Calendar Maintenance.

Notes:

1. The Monitor searches for the calendar under the network owner. If it does not find the calendar, the Monitor searches for it system-wide under SYSDBA.
2. Think ahead! Calendars are year-dependent. If a calendar cannot be found for the current year, the network is not scheduled and an error message is issued. **Be sure to define calendars for the coming year before they are needed!**

From the month of November of the past year onwards, the Entire Operations Monitor issues warning messages to the log.
