

# End-Of-Job Actions with Execution as a Temporary Dummy Job

Jobs can be executed as a temporary dummy job for different reasons. For further information, see Job Execution as a Dummy Job in the section System Overview.

This section covers the following topics:

- Carrying out the End-Of-Job Actions
  - Sysout Actions
- 

## Carrying out the End-Of-Job Actions

The End-Of-Job Actions are executed as follows (with a top-bottom priority):

<b>Conditions</b>	Conditions are always set or deleted (even if the job is a temporary dummy job).
<b>Dummy on account of Schedule</b>	No further End-Of-Job Actions are executed
<b>Dummy for other Reasons</b>	End-Of-Job Actions are executed.

## Sysout Actions

Actions, which refer to the sysout file, are not executed, if **no** sysout file exists. This case will apply, if the job is executed as a temporary dummy job.
