

# Message Sending

This section covers the following topic:

- Introduction
  - Defining a Message
- 

## Introduction

You can define or modify a message to be sent as the result of a defined event, or if the job terminated **ok** or **not ok**. This is especially useful to notify appropriate personnel of job failure.

The Entire Operations Monitor continues to send a message until it has been successfully transmitted.

## Defining a Message

A message can be defined for any one event or at the job level according to All checks ok and Any check not ok.

### To do so:

- Type **U** in the line command input field of the appropriate event on the End-of-Job Checking and Actions screen. Press Enter.

The Message and Message Recipients window opens.

Please refer to the common description of the message receiver table definition.
