

Natural Nucleus Error Messages NAT7651-NAT7700

NAT7660: Connect to server :1: port no. :2: failed; socket code :3:

Text	Connect to server ... port no. ... failed; socket code ...
Expl.	A connection to the development server failed due to one of the following reasons: - a wrong development server name was specified; - the specified port ID does not match the port where the development server is listening; - the development server is not active; - the server machine hosting the development server is not active.
Actn.	Check that the specified name matches the development server name, the development server is active, its port matches the specified port, and the server machine is accessible (e.g. via 'ping' command).

NAT7661: Protocol mismatch of Server Nat :1: (:2:) and Nat Studio (:3:)

Text	Protocol mismatch of Server Nat ... (...) and Nat Studio (...)
Expl.	The protocol versions of the Natural Development Server and the Natural Studio do not match. Although the Natural Studio can run with servers using an older or newer version of the protocol, some functionality might not or only partly be supported.
Actn.	Upgrade the Natural Development Server or the Natural Studio.

NAT7662: Development server file for application :1: not unique.

Text	Development server file for application ... not unique.
Expl.	The specified development server file differs from the active development server file. All mapped applications have to use one common development server file.
Actn.	Change the development server file for the current application.

NAT7663: Connection to NDV server lost or network failure.

Text	Connection to NDV server lost or network failure.
Expl.	<p>The remote Natural session or the Natural Development Server (NDV) has terminated abnormally, or a network failure has occurred.</p> <p>-</p> <p>Examine the NDV trace output for information on the connection termination. If NDV trace contains no such information, contact your network administrator.</p> <p>Try to remap the session to the server.</p> <p>-</p> <p>If the problem persists, check in the NDV server trace whether your buffer has arrived:</p> <ul style="list-style-type: none"> - If data have arrived, check for error information in subsequent trace records. - If no data have arrived, contact your network administrator.
Actn.	See explanation above.

NAT7699: :1: locked by :2:.

Text	... locked by
Expl.	The object to be locked is already locked, for example, because another user is editing the object.
Actn.	<p>Wait until the object is available again.</p> <p>If the lock is erroneous (e.g. after a system failure), use the Natural system command UNLOCK if you wish to unlock the object.</p>
