

Console Messages XCO0080E - XCO0086I

Message	Explanation	Action
XCO0080E MPM24-error, environment not established.	The Establish-Adabas-Environment call has failed. The Entire System Server terminates abnormally.	Please contact Software AG.
XCO0081E MPM00-error, target not initialized.	The Initialize-Adabas-Target call has failed. The Entire System Server terminates abnormally.	Please contact Software AG.
XCO0082I :1:.	TRACE data output.	No action required.
XCO0083W Duplicate WAIT ECB. User cleaned up.	After successful return from request handler: The user was already waiting. The new request is accepted and the old command queue entry is purged. The old ECB is reused for the new request.	No action required.
XCO0084W Multiple active requests. Delete old.	After successful return from reply handler: The command queue element of the user is not unique. Another element has been found with the same cross memory post information (OS/390 only). The old request has been purged and the reply for the new request has been initiated. This occurs only if a task has been cancelled and immediately restarted and if the same ASCB has been reused.	No action required.
XCO0085W Reply handling cancelled. Illegal ECB.	After successful return from reply handler: the reply cannot be delivered. The command queue element of the user is not unique. Another element has been found with the same cross-memory post information (OS/390 only). The reply currently processed is obsolete and has been purged. This occurs only if a task has been cancelled and immediately restarted and if the same ASCB has been reused.	No action required.
XCO0086I APPL ECB: :1:.	This message informs about the address of an Event Control Block. It will be issued only in conjunction with other messages.	No action required.
