

Displaying the Size of the Machine Code

With the Natural system command LIST, you can see whether a program has been compiled to machine code and also the size of the machine code.

To list compiled programs

- Enter in the command line: LIST DIR *object-name*

The directory information for the specified object will be displayed, showing at the bottom of the screen the size of the machine code, the OPT parameters used for the compilation and the NOC version under which the program was cataloged.

Details of the LIST command are provided in the Natural Command Reference documentation.
