

# Executing a Natural Command

This document describes the use of the Execute a Natural Command function.

The following topics are covered:

- Function Description
- Invoking and Using the Function

## Function Description

The Execute a Natural Command function allows you to execute a Natural command or run a Natural program from the ETP maintenance utility.

## Invoking and Using the Function

By either entering the Natural direct command or selecting the "N" task on the ETP main menu, the "Execute a Natural Command" screen appears.

```

23:59:59          ***** ENTIRE TRANSACTION PROPAGATOR *****          2000-12-24
                          Execute a NATURAL command
