

LE - Limit Error Processing

Parameter	Possible Values	Default Value	Applicable Statements
LE	ON / OFF	OFF	SET GLOBALS

With this session parameter, you determine the action to be taken if the limit specified for processing loop execution is reached.

The limit may be either a global limit (see session parameter LT) or a limit specified for a given processing loop.

LE=OFF	The Natural program will be terminated normally at the point where the limit was reached.
LE=ON	The Natural program will be terminated and an error message will be issued when the limit is reached. LE=ON applies only to programs which are loaded from a library located in the system file FUSER, that is, library SYSTEM, or with a (library) name that does not start with the prefix "SYS".

Example:

```
SET GLOBALS LE=OFF
```
