

# %TRI - Activate/Deactivate Internal Trace

**Note:**

This command is for Mainframes only.

---

**Command Syntax**

$\%TRI \left\{ \begin{array}{c} \text{ON} \\ + \\ \text{T} \\ \text{OFF} \\ - \\ \text{F} \end{array} \right\}$
---

This command activates/deactivates the internal trace function.

This function is intended primarily for Software AG internal use for debugging purposes. It passes trace data to the SYSRDC utility which is described in the section Debugging and Monitoring.

**Notes:**

- Instead of "ON", you can also specify "+" or "T" (true). Instead of "OFF", you can also specify "-" or "F" (false).
- The internal trace function can also be activated/deactivated with the profile parameter ITRACE (see the section Profile Parameters in the Parameter Reference documentation).
