

Upper Case - ERRUPPER

Natural system messages are provided in lower case. If your terminals cannot display lower-case characters correctly, convert the messages from lower to upper case by executing the program ERRUPPER in the library SYSERR. Once the messages have been converted to upper case, however, you cannot convert them back to lower case. To recover lower-case messages, you have two options:

- Reload the messages with the SYSTRANS utility.
- Unload the lower-case messages to a free language code using the SYSTRANS utility before conversion so that a backup always exists.

See also the Natural SYSTRANS Utility documentation.
