

What's New ?

This document describes the enhancements and corrections that apply to the release of Version 1.1.4 of the Natural Development Server.

The following topics are covered:

- Product Enhancements and Corrections
 - Documentation
 - Dropped Functionality
 - End of Maintenance of Natural Development Server Versions
-

Product Enhancements and Corrections

The following enhancements are provided with Version 1.1.4 of the Natural Development Server:

- The Natural Development Server is available under SMARTS on VSE/ESA.
- The performance in the tree views of the library work space has been improved.
- New NDV configuration parameters KEEP_TCB and INITIAL_USERID

In addition, this version contains

- all ZAPs,
- INPL updates,
- early warnings and
- source changes

applied to the predecessor version as error corrections.

Documentation

The following changes have been made to the documentation:

- The Natural Single Point of Development documentation has been revised and updated.
- The Natural Development Server (NDV) documentation has been revised and updated.
- A document describing the NDV installation under SMARTS has been added.
- The SMARTS documentation has been included on the Natural documentation CD.

Dropped Functionality

System Management Hub is no longer used.

End of Maintenance of Natural Development Server Versions

The maintenance for Natural Development Server Version 1.1.2 ends on February 28, 2003. Extensions of the maintenance for Natural Development Server Version 1.1.2, if any, will be published via ServLine24 (<http://servline24.softwareag.com>).

Software AG strongly recommends that you migrate to Natural Natural Development Server Version 1.1.4 as soon as possible.
