

ASYNNAM - Output System ID for Asynchronous Processing

This Natural profile parameter is for mainframes only. It only applies to Natural under UTM.

For asynchronous processing between two Natural applications that are running under the TP monitor UTM, this parameter specifies the address of the synchronous application which is used by the asynchronous application to send messages to the synchronous application.

Possible settings	1 - 8 characters	Valid transaction name.
Default setting	blank	No asynchronous processing takes place.
Dynamic specification	YES	
Specification within session	NO	

For further information on asynchronous processing under UTM, see **Asynchronous Transaction Processing** in the Natural TP Monitor Interfaces documentation.
