

%N - Activate Non-Conversational Mode

Command Syntax

%N

This terminal command is used with a SET CONTROL statement and causes the next screen to be displayed without requiring any user response for processing to continue; that is, after the screen has been displayed, processing will continue immediately without waiting for any user input.

This command may be used to send messages about the progress of program execution to the user. The command only applies to the next output screen (that is, the screen that is output when the next I/O is executed).

Under IMS/TM:

This terminal command does not apply if an IMS scratch-pad area is used.
