

Functions - Overview

This section describes the main functions provided by the Natural Object Handler. To guide you through the steps required to execute the unload, load and scan functions, you may take advantage of the Object Handler wizards. The wizards are activated by default. If you prefer the unload, load or scan mode for the experienced user instead, on the Object Handler main screen, mark the field next to Advanced User.

To automate function processing, for the unload, load or scan function, the Object Handler provides the option to create standard procedures to define recurring settings and object specifications. See the section Workplans for further information.

This section covers the following topics:

- Wizards
- Advanced User
- Restart Load
(section: Settings)
- View
- Find
(section: Commands for CUIs)
- Administration
- Change Workplan Library
(section: Administration)
- System File Selection
- Library Selection
- Workplan Selection
(see List in the section Administration)
- System Error Message Selection
- Object Selection
