

ITERM - Session Termination in Case of Initialization Error

This Natural profile parameter is for mainframes only.

It determines whether or not the Natural session is to continue in the case of a session initialization error.

Possible settings	ON	If a session initialization error occurs, the session is terminated immediately after the initialization error messages.
	OFF	If session initialization errors occur, the following happens: In online mode: the initialization errors are displayed and you can choose to either continue or terminate the session. In batch mode: the session is continued with the initialization errors going unnoticed - possibly leading to errors or undesired results later in the session. The setting ITERM=OFF is not possible with STACK=INPL.
Default setting	ON	
Dynamic specification	YES	
Specification within session	NO
