

# LS - Line Size

This Natural profile parameter is for:

- mainframes
- UNIX/OpenVMS and Windows

It parameter indicates the maximum number of characters permitted per line for DISPLAY, INPUT , PRINT and WRITE statements. Together with the profile parameter PS, it defines the amount of page buffer space acquired during Natural initialization.

<b>Possible settings</b>	35 - 250, or 0	Maximum number of characters permitted per line.  LS=0 indicates that the output device line size is to be used.
<b>Default setting</b>	0	In online mode, the default setting will always be set to the physical line size, even if LS has been set to another setting at the start of the Natural session.
<b>Dynamic specification</b>	YES	
<b>Specification within session</b>	NO	Within a Natural session, the profile parameter LS can be overridden by the <b>session parameter LS</b> .
