

NAFSIZE - Size of Buffer for Natural Advanced Facilities

This Natural profile parameter is for mainframes and only applies if Natural Advanced Facilities is installed.

It specifies the size of the work buffer used by Natural Advanced Facilities.

Possible settings	0 - 64	Buffer size in KB.
Default setting	0	Disables Natural Advanced Facilities.
Dynamic specification	YES	
Specification within session	NO	

If Natural Advanced Facilities is to be used, a setting has to be specified for this parameter; see NATSPOOL Initialization (in the Natural Advanced Facilities documentation).

If the requested space is not available, Natural Advanced Facilities cannot be used.
