

%A - Playing Back a Recording

Note:

This command is for Mainframes only.

Command Syntax

<code>%A <i>name</i></code>

With the terminal command `%Aname`, you cause the recording saved under that *name* to be executed again. This requires that your current library is the one in which the recording is stored.

If you issue the command `%Aname` while a session is being recorded, the recording specified with `%Aname` will not be executed but the command `%Aname` is included into the source that is being recorded. Thus, you can execute a recording from within another recording and concatenate a series of recordings to one another. However, you cannot have nested recordings; the execution of the recording that contains the `%Aname` command stops after that command and is not resumed when the execution of *name* finishes.

Further information on recording is provided in Recording in the section Debugging and Monitoring.
