

# Dataspace-Specific Maintenance

When maintaining dataspace, only standard maintenance functions are needed. However, specific rules apply when purging objects of type dataspace. These rules are described below.

## Purge Dataspace - Code P

If you confirm the purge operation with DELETE, the following objects are deleted:

- the dataspace object
- all links to child objects and from parent objects
- the connection from the dataspace to the DB2 database is undone.  
All DB2 tables contained in this dataspace are removed from the file list of the corresponding DB2 database object.
