

# Program

Predict knows more than a dozen different types of programs, ranging from parameter data area to Natural Expert model. About a dozen different programming languages are supported.

In the predefined Predict metastructure, a program can have passive and active associations of the following types:

Valid passive associations:     *Contained in PG*  
                                       *Used by PR*  
                                       *Belongs to SY* (default passive association)  
                                       *Is comp. of SY*  
                                       *Used by SV*

Valid active associations:     *Uses FI concept.* (first default active association)  
                                       *Input FI*  
                                       *Returns FI*  
                                       *Uses PR concept.* (second default active association)  
                                       *Defines IE*  
                                       *Invokes MD*

This section covers the following topics:

- Program Maintenance Menu
- Defining More Attributes of Programs
- Program Maintenance
- Program Retrieval
